ECONOMIC COMMENTARY

Market review

June turned out to be a positive month for risk assets as credit spreads tightened and U.S. economic data continued to point to strong growth. Additionally, the Federal Reserve (Fed) struck a more hawkish tone during the month than markets had expected. The consumer-led recovery picked up speed during the quarter as vaccination rates increased and relaxed social distancing measures paved the way for some pre-COVID normalcy. 1Q21 real GDP grew at a 6.4% quarter over quarter (q/q) seasonally adjusted annual rate. Personal consumption, the largest driver of the recovery, surged an annualized 11.4% after upward revisions. Economic output is now only 0.9% below peak 4Q19 real GDP, and continued strength in consumer spending and investment could result in a near double-digit surge in real GDP in the second quarter. *(continued page 4)*

ECONOMIC COMMENTARY (cont.)

While U.S. economic and manufacturing activity remains solid, inflationary pressures continued to grow as ongoing supply chain strains and hiring difficulties impacted production.

The June jobs report showed encouraging improvement in the labor market as firms made progress in filling a record number of job openings. Total nonfarm payrolls increased by 850,000 in June, beating consensus expectations, with upwards revisions to the modest May reading. The leisure and hospitality industry continued to make strides in hiring, adding 343,000 jobs, and strong gains occurred in retail and education hiring. The unemployment rate edged up to 5.9%, while the labor force participation rate held steady at 61.6%. Notably, wages rose 0.3% month over month (m/m) and 4.6% on an annualized year-over-2 year basis as businesses have raised wages in response to labor market shortages.

Given the powerful economic rebound coupled with rising wages, inflation remained top of mind for investors as it has now surpassed the Fed's 2% target. The headline PCE price index rose +0.4% m/m and +3.9% year over year (y/y) in May. The core PCE deflator also accelerated to +0.5% m/m and +3.4% y/y, falling short of market expectations. The May U.S. CPI report showed consumer prices rising at their fastest pace in more than a decade, as a rapidly reopening economy ran into global supply shortages. Headline CPI for May exceeded expectations, rising +0.6% m/m and +5.0% y/y, while consumer prices excluding food and energy rose +0.7% m/m and +3.8% y/y.

On balance, the Federal Open Market Committee (FOMC) signaled a more hawkish stance towards its monetary policy outlook at its June meeting, driven by a materially stronger growth and inflation outlook in the medium term. Notably, the median federal funds rate projection—as measured by the “dot plot”—now reflects two rate hikes in 2023. Chair Powell also confirmed that the FOMC is now actively discussing a timetable for tapering its massive bond purchases even as the committee voted to maintain the current federal funds target rate at a range of 0.00%–0.25% and reaffirmed its commitment to \$120 billion in asset purchases per month, until it believes “substantial further progress” has been made towards its inflation end employment goals. Along with its more optimistic outlook on the economy, the committee reiterated its view that higher inflation over the next few months will be transitory and that it will need to see strong growth persist to give the Fed comfort about achieving “substantial progress.”

As hoped, the committee made technical adjustments to its administered rates, increasing the interest rate paid on excess reserves (IOER) and the rate on its overnight reverse repurchases agreement program (RRP) by 5 bps to 0.15% and 0.05%, respectively, in order to support smooth functioning in short term funding markets. Following the announcement, short term yields moved modestly higher. These technical adjustments are likely a temporary fix to money market yield levels, which have tested the lower bound of the fed funds target range, as overall supply/demand dynamics thematically remain unchanged. Reserve growth from quantitative easing (QE) and the pay down of the U.S. Treasury's General Account will continue to exert downward pressure on short term rates, particularly as flows into money market funds remain strong and Treasury bill supply declines. With this backdrop, Treasury bill yields rose. The three-month Treasury bill yield ended the month at 0.04%, up almost 4 bps from the previous month-end; and the 12-month Treasury bill yield ended at 0.07%, up approximately 3 bps on the month.

Outlook

While global growth momentum may have peaked, we expect the U.S. output gap to close by midyear and for U.S. GDP to clock 6.8% in 2021 and 5.1% in 2022. The wild cards that could change the trajectory of growth are the efficacy of the vaccines against new coronavirus variants (potential downward pressure) and the magnitude of fiscal stimulus coming out of Congress (upward pressure). The inflation story has become a complex and tangled web of considerations; in sum, as the structural factors supporting secular stagnation are challenged, we think the era of structurally low inflation may have passed.

The June FOMC meeting was an acknowledgement that fiscal support this year has not only short-circuited the usual disinflationary dynamics following a recession, but also that the distribution of possible inflation outcomes has widened. For now, we expect the Fed to keep their word by remaining accommodative despite higher inflation as long as it continues to be associated with what they believe to be transitory factors.

ECONOMIC COMMENTARY (cont.)

With unemployment elevated and labor force participation depressed versus pre-COVID levels, an accommodative policy stance is still warranted, even as vaccine distribution has been strong and growth is robust. Nevertheless, the FOMC may begin telegraphing tapering plans later this summer, and initiate tapering in 2022. The main driver of rates in the coming months will be the incoming inflation and jobs data, and how the market interprets the Fed's reaction to these.
